Git Guide for UxGruppenArbeit

1. Choose Where to Save the Project

Navigate to the folder where you want to place the project:

Open Git Bash and type:

cd "C:/Users/YOURNAME/Documents/University"

(Replace with your own path)

2. Clone the Repository

Run this command to get the project files:

git clone https://github.com/david360Degrees/UxGruppenArbeit.git

3. Enter the Project Folder

cd UxGruppenArbeit

4. *Before doing any new work!!*:
Pull Before You Start

git pull

This gets you the newest updates of the repository on your PC

5. Committing Your Changes

1. Add your changes:

git add .

2. Commit your changes with a message:

git commit -m "your message here"

These 2 will add the changes to your local git files

3. Push your updates:

git push

This will add all the changes you made to the github repository

Notes

- Always run *git pull* before you start working.

- Only *git add* . when you're ready to save your changes.
